

EXPANSION OF THE UPPER JAW AND FUNCTIONAL REHABILITATION

Dr. Ben Younes-Ouzan

FROGGYMOUTH PLAYS A CRUCIAL ROLE IN THIS CLINICAL CASE, AS IT ENABLES TARGETED INTERVENTION ON THE UPPER JAW WHILE SIMULTANEOUSLY CORRECTING TONGUE POSTURE, WHICH PROMOTES THE DEVELOPMENT OF DENTAL PROPRIOCEPTION.

BY EXPANDING THE UPPER JAW IN PARALLEL WITH FUNCTIONAL REHABILITATION, WE OBSERVED SPONTANEOUS WIDENING AND ADVANCEMENT OF THE LOWER JAW. INITIALLY, A DEVICE TO ENHANCE THE LOWER JAW WAS PLANNED AS A SECOND STEP; HOWEVER, SURPRISINGLY, THIS WAS NOT NECESSARY.

WE EXPANDED THE UPPER JAW USING FROGGYMOUTH, AND REHABILITATION DID THE REST. DENTAL PROPRIOCEPTION GRADUALLY LED TO THE ADVANCEMENT OF THE LOWER JAW.
