

**RELAPSE CONTROL WITH
FROGGYMOUTH**

Dr. Romano

DR RAFI ROMANO SHARED WITH US THIS CASE ILLUSTRATING THE ISSUE OF ORTHODONTIC RELAPSE. THIS IS AN 18-YEAR-OLD GIRL WHO RELAPSES AFTER ORTHODONTIC TREATMENT DUE TO LINGUAL PROJECTION AND MOUTH BREATHING, IN THE PRESENCE OF UPPER AND LOWER FIXED RETAINERS.

DR. ROMANO THEREFORE DECIDED TO CORRECT HIS DYSFUNCTIONS BY FITTING HIM WITH A FROGGYMOUTH.

IN 6 MONTHS OF WEARING THE FROGGYMOUTH, 15 MINUTES A DAY, THE RELAPSE STOPPED AND THE OPEN BITE BEGAN TO CLOSE, ALTHOUGH THE PATIENT WAS ALREADY 18 YEARS OLD.

IMPROVEMENTS WILL CONTINUE NATURALLY NOW THAT SHE HAS REESTABLISHED OROFACIAL BALANCE. THE PATIENT STATES THAT SHE FEELS HER BREATHING IS BETTER, THAT SHE IS BREATHING THROUGH HER NOSE, AND THAT SHE FEELS THE CHANGE IN THE POSITION OF HER TONGUE.
